

Predictive Analytics Using Historical Data

Objective

The objective of this project is to analyze historical sales data and identify trends, patterns, and business insights using Power BI. The dashboard helps in understanding sales performance and supports data-driven decision-making.

Dataset Used

Superstore Dataset

Tools Used

- Power BI Desktop
- Superstore Dataset

Dashboard Components

1. Total Sales Card
2. Total Profit Card
3. Total Orders Card
4. Sales Trend Over Time
5. Sales by Region
6. Sales by Category
7. Sales by Segment
8. Sales vs Profit Analysis
9. Region Slicer
10. Category Slicer

Data Preprocessing

- Imported the Superstore dataset into Power BI.
- Checked and validated data fields.
- Organized sales, profit, region, category, and segment data for analysis.
- Created interactive visualizations for better understanding of historical trends.

Analysis and Insights

- Historical sales trends were analyzed using a line chart.
- Regional sales performance was compared across different regions.
- Category-wise sales analysis identified high-performing categories.
- Segment-wise analysis highlighted customer group contributions.
- Sales and profit relationships were examined through scatter plot visualization.

Conclusion

This dashboard provides valuable insights into historical business performance through interactive visualizations. It helps users analyze sales trends, customer segments, and regional performance, enabling better business decisions based on historical data.
